

How signing and payment works on your project

Your architect uses ArchiTrak to manage quotations, signatures and payments on your building project. This one-page guide explains what happens at each step — and, most importantly, when to pay and when not to.

1

You receive a quotation to sign electronically

You'll get an email from **Archisign**, our secure e-signature service, with a link to review the contractor's quotation (the *devis*). Your architect has already checked it — including the contractor's insurance cover — before it reaches you.

2

Signing only authorises the work — it is not a request to pay

By signing, you approve the quotation so the contractor can be engaged. The quotation may show prices, deposits or bank details, but **none of these are payable at this stage**.

3

Pay only against a Payment Certificate

As work progresses, your architect verifies what has actually been done and issues you a **Payment Certificate** — a document stating exactly what to pay, to whom, and why. Every payment on your project is authorised this way, including any deposit.

4

Everything is tracked for you

ArchiTrak keeps a running record of what has been quoted, signed, certified and paid — so you always know where your project stands, and nothing is paid twice or too early.

!

Don't pay anything now.

At the signing stage, you are only authorising the quotation. Payment instructions will follow with each Payment Certificate. If you're ever unsure whether a payment request is genuine, check with your architect first.

WHAT TO EXPECT

- ✓ Signature requests always come via Archisign, with your architect's message.
- ✓ Payment Certificates come from your architect, with clear instructions.
- ✓ You can ask your architect about any document at any time.

WHAT WE WILL NEVER DO

- ✗ Ask you to pay directly from a quotation or signature email.
- ✗ Change bank details by email without a Payment Certificate.
- ✗ Rush you — take the time you need before signing.
